LiveStage professional

LiveStage Professional developers on the OS X platform can now take advantage of BBEdit, the powerful text editor from BareBones Software, to edit QScript.

About BBEdit

BBEdit is the leading professional HTML and text editor for the Macintosh. Specifically crafted in response to the needs of Web authors and software developers, this award-winning product provides a plethora of features for editing, searching, and manipulating text.
For more information about BBEdit visit http://www.barebones.com

LiveStage and BBEdit

LiveStage takes advantage of the Codeless language modules functionality added in BBEdit 8.0 to add syntax coloring support for QScripts. QScripts and LiveStage behaviors opened in BBEdit are now formatted like in LiveStage's internal script editor.

Simply open your QScript files (".qscript") or Behaviors (".lsb") into BBEdit to edit them.

LiveStage Professional 4.5.4 and higher allows developers to edit all the scripting of a project in BBEdit. Simply select "Edit in BBEdit" from the File menu to view and edit your project's scripts in BBEdit. Saving your BBEdit document transfers the modifications done in BBEdit back to LiveStage Pro .

While editing your project's scripts in BBEdit, LSP's internal script editor cannot be modified.

Installing the Codeless Language Module

Download the QScript language module for BBEdit from:

http://stagedoor.totallyhip.com

The QScript module should to be copied to the following directory:

/Library/Application Support/BBEdit/Language Modules/

Customizing Codeless Language Modules
If you have customized your internal script editor in LSP using the preferences panels, you can also customize the Codeless Language Modules as well.
